

PRESS RELEASE

October 2003

Autoliv Racks Up Productivity

Autoliv Limited in Havant supply the major car manufacturers. They are a pioneer in both seat belts and airbags and a technology leader within automotive safety.

The company faced warehouse productivity issues and called in Romsey based Spaceway, the space solutions company, to audit existing operations and then to plan and install a new storage system that would improve product selection and distribution.

Spaceway's Charlie Jeary explains:

“Autoliv needed a new manual picking system for components prior to assembly. In conjunction with Autoliv, we designed and installed a live storage system within the existing pallet racking and provided in excess of a 130 carton locations and 48 pallet locations in 16 bays, all within the same picking face. The system also incorporates a pallet separator for the safe removal of empty pallets.

“The company now benefits from easy stock replenishment and increased productivity as the clear presentation of goods leads to improved accuracy of picking and reduced travel times. This new system is adaptable to any manufacturer of pallet racking.”

Note to Editors:

Spaceway is one of the leading providers of integrated interior space solutions for private sector businesses and public organisations.

The company recognises that the effective and efficient use of space is a critical success factor for businesses, contributing directly not only to competitiveness but also to the morale and motivation of a workforce.

Through the company's unique partnering approach, Spaceway aims to co-develop, design and implement the most innovative yet cost effective solution for each project regardless of its size. Whether it's a total redesign or a need to increase the amount of usable space in a particular area, Spaceway has the experience and expertise to ensure the promised design concept is translated into reality – on time, to budget and with minimal disruption to business operations.
