

Case Study

DALLAS AIRMOTIVE

PROJECT

The re-fit of an empty hangar at Bournemouth International Airport.

CLIENT

Dallas Airmotive

DETAIL

Aeronautical engine specialists, Dallas Airmotive Inc of Dallas Texas, required the re-fit of an empty hangar at Bournemouth International airport. They called in Spaceway when a planned move to a new location fell through, to ensure that another hangar at the airport would meet their needs.

The building required a mezzanine floor, office partitioning, furniture and racking, ground floor workshops, reference library and staff canteen area. Spaceway worked to the customer specifications to ensure the new facility fitted the bill.

Spaceway's Peter Upton said, "The whole project was completed within eight weeks. We worked hard to make sure the work was completed within cost constraints and was exactly what the customer required from their new facility."

CLIENT FEEDBACK

"We were planning to move to a new location but when the plans were changed at the last minute, it was back to the drawing board. From the moment we called in Spaceway we found them quick and responsive. There were a few glitches which needed speedy redesign and it was all done very professionally."
