

Case Study

QS FAMILY WEAR

PROJECT

The design and installation of a new hanging garment system at retailer QS plc's West Worthing Distribution Centre.

CLIENT

QS plc

DETAIL

Spaceway South installed a new hanging garment system which included additional warehouse racking as well as the two-tier hanging system.

The system was designed to cater for more than 200,000 garments and included a mezzanine floor.

The provision of a conveyor and boom system in the unloading bay has sped up the unloading process and assisted in improving the throughput of goods.

CLIENT FEEDBACK

"The new system has improved efficiencies in the warehouse and has helped us handle the opening of 10 new stores in the last year as well as provide us with the capacity for further expansion."

Lesley Willoughby
Property Services Manager,
