

# Case Study

## VERO ELECTRONICS

### PROJECT

The design, manufacture and installation of a two-tier mezzanine floor over an existing paint line for additional storage space.

### CLIENT

Vero Electronics

### DETAIL

Spaceway were originally contracted to install a mezzanine floor for additional storage. Following the success of this project Vero asked Spaceway to help free-up more production space.

A second mezzanine floor was provided with offices on the new level. The platform also allowed room for storage. The production area was free for its primary purpose.

Work was carried out around Vero's shift patterns to minimise disruption to the company's routine.

### CLIENT FEEDBACK

*"This is a very busy environment, and it is imperative that we keep production moving efficiently at all times. Our biggest concern was that inefficient storage was affecting our production capability, but Spaceway provided a fast and efficient solution to our requirements."*
