

# Case Study

## WINCHESTER GROWERS

### PROJECT

To increase storage, display and dispatch facilities.

### CLIENT

Winchester Growers

### DETAIL

A 12m by 15m mezzanine floor has provided Winchester Growers with extra product storage space for boxed bulbs. The floor caters for heavy duty loading and includes a handrail with a sliding loading section to enable forklift trucks to place pallets onto the floor.

The installation was timed to coincide with the six months of the year when the bulbs are being grown, which is a quiet time for the company. Spaceway ensured that the floor was ready in time for the heavy production phase when the bulbs have to be picked, packaged and dispatched.

Winchester Growers employ between 50 and 150 workers depending on the season and supplies a range of bulbs to over 400 garden centres and supermarkets.

### CLIENT FEEDBACK

*"We called Spaceway in to plan the work 18 months ago and when we had the available budget called them back to carry out the work. We particularly needed a floor that was strong enough for heavy duty loading. We found Spaceway fast, efficient and cost effective."*
